

SOFTSLAM®

THE QUIET AND SAFE DOOR SOLUTION

Personal injuries, noise, and damage are serious issues with doors slamming. Injuries directly attributable to doors cost New Zealand more than \$23 million/year. Other losses occur such as the loss of healing sleep and concentration due to noise resulting in irritation and loss of productivity.

Damage to walls, architraves and expensive fixtures/fittings caused by the jarring, shuddering or vibration of slamming doors is completely eliminated with the installation of SoftSlam® saving you the time and expense of costly repairs.

SafeSlam – SoftSlam® prevents serious injury's caused by the *massive 40 tonnes of pressure* built up during a door slam - SoftSlam® absorbs this pressure in its patented mechanism decreasing door speed to a soft & safe closing speed.

QuietSlam – **SoftSlam**® completely eliminates the loud door 'BANG!' making it perfect for all quiet places.

THE SOFTSLAM® SOLUTION

Designed for doors in the home, hotel, office, retail, industry and more.

Discreet enough to use in modern design, historic buildings and your family home. **Rugged** enough to use in public & industrial environments.

SoftSlam® technology is the future of safe & quiet door operation!
